## Legend Mon

### MontCT

#### shelter / inc

- Affordable
- Moderately Unaffordable
- Seriously Unaffordable
- Severely Unaffordable

The affordability ratio is when you take the median ratio of the free market price for a housing unit and divide that by the median of household annual income. In other words this ratio represents how much the market price of a house is verses how much people in one household make per year, which gives you an estimate on how much a family can afford in a given area.
